DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-20, drawn to a closure system for a fluid outlet, classified in class 141, subclass 192.
- II. Claims 21 and 22, drawn to a method for dispensing fluid, classified in class 222, subclass 504.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process can be practiced by another and materially different apparatus such as one that doesn't require a motor and lead screw.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

During a telephone conversation with Bryant Matthias on 1/23/07 a provisional election was made without traverse to prosecute the invention of Group I, claims 1-20. Affirmation of this election must be made by applicant in replying to this Office action.

Claims 21 and 22 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Delete Claims 21 and 22.

This application is in condition for allowance except for the presence of claims 21 and 22 directed to Group II, non-elected without traverse. Accordingly, claims 21 and 22 have been cancelled.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: None of the prior art of record, alone or in combination, teaches a closure system for a fluid outlet, the system comprising a motor connected to a threaded shaft that passes through and is enmeshed with a threaded hole of a hub, the hub being connected to a closure for covering the fluid outlet the hub further comprising a curved slot coaxial with the threaded shaft, the curved slot accommodating a stationary pin that permits a partial rotation of the hub about an axis through the threaded hole, the shaft being connected to a biasing member that engages the stationary pin and also being connected to a radially outwardly extending finger, as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Drawings

The drawings filed on 3/16/04 are informal, since the letters, numbers and lines are not uniform in nature throughout the Figures. In order to avoid abandonment of this application, corrected formal drawing are now required in reply to the Office action. The correction will not be held in abeyance.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited art of record pertains to various fluid outlet closure systems, similar to the Applicant's device.
